

EXHIBIT 3

CLERK OF SUPREME COURT

MAY 05, 2017

ELECTRONICALLY FILED

IN THE IOWA DISTRICT COURT FOR POLK COUNTY

<p>PLANNED PARENTHOOD OF THE HEARTLAND, INC., and JILL MEADOWS. M.D.,</p> <p>Petitioners,</p> <p>v.</p> <p>TERRY BRANSTAD ex rel. STATE OF IOWA and IOWA BOARD OF MEDICINE,</p> <p>Respondents.</p>	<p>Equity Case No. _____</p> <p>AFFIDAVIT OF JANE COLLINS, PH.D.</p>
---	--

1. I am a Professor of Community & Environmental Sociology at the University of Wisconsin, Madison. My areas of expertise include poverty, gender studies, and low-wage labor markets.

2. I became a member of the faculty at UW-Madison in 1992 after working for nine years as an Assistant and Associate Professor of Anthropology at the State University of New York at Binghamton. I received my PhD in Anthropology from the University of Florida in 1981. For more than 30 years, I have conducted research on low-wage labor and poverty, both in the United States and in Latin America.

3. I have authored or co-authored five books and more than 50 articles and have edited or co-edited four additional books. My most recent book on poverty, *Both Hands Tied*, co-authored with my graduate student Victoria Mayer and published by University of Chicago Press in 2010, is based on research about women transitioning from welfare to work in Milwaukee and Racine, Wisconsin. *Both Hands Tied* received 2011 Outstanding Book awards from two sub-units of the American Sociological Association: the Poverty, Inequality & Mobility section and the Labor & Labor Movements section. It also received the Sarah Whaley Book Prize from the

National Women's Studies Association. I have been a faculty affiliate of the Institute for Research on Poverty at UW-Madison for many years and a member of IRP's Executive Committee since 2006.

4. My research on poverty and low-wage labor markets in the United States and Latin America has been supported by a number of grants from the National Science Foundation, as well as from the Inter-American Foundation and the Wisconsin Department of Workforce Development.

5. My curriculum vitae, which describes my experience and qualifications in greater detail and lists my publications, is attached as Exhibit A.

6. I submit this affidavit in support of Plaintiffs' Motion for a Temporary Injunction.

EFFECTS OF THE ACT ON LOW-INCOME WOMEN IN IOWA

7. I understand from lawyers for the Petitioners in this case that prior to the Act, Iowa law required a woman seeking an abortion to receive a state-mandated ultrasound and to be offered the opportunity to view the ultrasound. However, I understand that a new law, section 1 of Senate File 471 ("the Act"), requires women to obtain the ultrasound, to be offered the opportunity to hear the fetal heartbeat and a description of the fetus, and to receive information about alternatives to abortion, risk factors, and details of the abortion procedure at least 72 hours prior to receiving a medically induced or surgical abortion. As a result, Iowa women will now be required to make an additional trip to clinics that provide abortion services. Because most Iowa clinics are already scheduling appointments one to three weeks from the time of the initial request for services, the Act's requirements of an additional trip along with a mandatory delay will result in severe delays for women seeking an abortion. These requirements will mean that some women who wanted a medication abortion will instead have to have a surgical abortion.

Some women requiring a surgical abortion will be unable to access that procedure within the first 22 weeks of pregnancy dated from a woman's last menstrual period ("lmp"), the gestational age limit also imposed by the Act, and therefore will be prevented from having an abortion in the state altogether.

8. I have become familiar with the difficulties imposed on low-income women by laws that require women seeking to have an abortion to travel farther distances through my research and familiarity with literature in the field.

9. By requiring Iowa women to make an additional trip to the health center in order to obtain an abortion, the Act will impose serious economic and logistical burdens and mental and emotional strain on low-income women who seek an abortion. Based on my 30 years of experience studying poverty, it is my opinion that the Act will impose real hardships on some poor and low-income women, by forcing them to skimp on food and other basic necessities for themselves and their families, to fall behind on bills and rent, and to take on debt they cannot afford, among other things. In addition, the Act will force some women to delay their abortions as they attempt to come up with the necessary money and make the logistical arrangements. Others will not be able to obtain an abortion at all and therefore will be forced to continue a pregnancy they would have otherwise ended.

Poverty and Low-Income Women in Iowa

10. According to the U.S. Census Bureau, Iowa's overall poverty rate, measured as the proportion of individuals living in households at or below 100% of the federal poverty threshold, was 12.5% in 2015.¹ But, as explained below, these figures dramatically underestimate the percentage of families who are financially struggling in Iowa. A more realistic

¹ U.S. Census Bureau, American Fact-Finder (Iowa), "Poverty Status in the Past 12 Months, American Community Survey 5-Year Estimates," <https://www.census.gov/quickfacts/table/PST045216/19>.

assessment is that more than one-quarter of Iowa residents live in households that struggle significantly to make ends meet.

11. The federal poverty threshold is set by the United States Department of Health and Human Services, using a formula originally developed in the 1960s. That formula starts with an assumption that families spend one-third of their income on food, which no longer accurately reflects reality. According to this formula, a single person who makes less than \$12,060 per year in 2017 falls below the federal poverty line, with the poverty threshold increasing \$4,180 for each additional household member.² However, this formula is seriously outdated. Poor families today spend much more, proportionally, on housing and transportation than in the past. The formula also fails to account for other necessary costs, including childcare, medical expenses, utilities, and taxes, and it does not consider regional differences in costs.³ Because of these flaws, poverty experts now generally use 200% of the federal poverty guideline as a closer approximation of what people really need to earn to survive on their own. (Many experts refer to families living at or below 100% of the federal poverty line as “poor” and those between 100 and 200% as “low-income.”)⁴ In 2013, 27% of individuals in Iowa lived in households that were poor or low-income.⁵

⁴ Short, K. and Smeeding, T., *Understanding Income-to-Threshold Ratios Using the Supplemental Poverty Measure*, U.S. Census Bureau, August 21, 2012, p. 3. <https://www.census.gov/hhes/povmeas/methodology/supplemental/research/SEHSD2012-18.pdf>.

⁵ The Henry J. Kaiser Family Foundation, “Distribution of the Total Population by Federal Poverty Level (above and below 200% FPL, 2015),” <http://kff.org/other/state-indicator/population-up-to-200-fpl/?currentTimeframe=0&sortModel=%7B%22colId%22:%22Location%22,%22sort%22:%22asc%22%7D>.

12. Even this figure, however, underestimates the poverty rates of women impacted by the Act, since poverty rates in the U.S. are higher for women than men, and are highest for women during their childbearing years and in old age.⁶ The poverty rate for Iowa women in 2015 was 13.7%.⁷ In addition poor and low-income women have higher rates of unintended pregnancy and abortion.⁸ In fact, a survey of women having abortions in the United States in 2014 found that 49% of women reported being below the federal poverty line, with another 26% living on incomes between 100% and 199% of the federal poverty line, for a total of 75% of women getting abortions being poor or low income.⁹ It is my understanding, based on information provided by Planned Parenthood of the Heartland, that over 50% of women seeking abortion in Iowa are at or below 110% of the federal poverty level.

13. To understand the dire circumstances of people living in poverty—and what a burden an additional expense of even something as little as \$50–\$100 can impose—it is helpful to consider a household budget for such a family. To do this, we might consider a single-parent household in which the adult earner brings in a full-time, year-round salary at minimum wage. These assumptions are realistic because data indicate that most women seeking abortions have at

⁸ Finer, L.B. and Zolna, M., “Shifts in Intended and Unintended Pregnancies in the United States, 2001–2008,” 104 Am. J. of Pub. Health S43, S45 Table 1.

⁹ Jerman, J., Jones, R.K., Onda, T., “Characteristics of Abortion Patients in 2014 and Changes Since 2008” Guttmacher Institute, 2016, available at https://www.guttmacher.org/sites/default/files/report_pdf/characteristics-us-abortion-patients-2014.pdf. The Guttmacher Institute study that reports these data was based on a survey administered to a large number of patients at a carefully stratified random sample of clinics across the United States and thus these numbers can be understood to be broadly representative.

least one child¹⁰ and are unmarried.¹¹ This household's income would be \$14,500, which is more than 10% below the official poverty level for a two-person household (\$16,240). A household with a total income of \$14,500 would not pay income taxes on this amount, but would pay \$1,109 in payroll (Social Security and Medicare) taxes, leaving a net income of \$13,391.

14. Sample budgets for a one-child single-parent family with this level of income illustrate how challenging, and indeed virtually impossible, it is to cover the basic costs of living on this level of income.¹² Budget 1 represents the situation of a one-child single-parent family that receives all available forms of state and federal aid: the federal and state Earned Income Tax Credit ("EITC"), Supplemental Nutritional Assistance ("SNAP"), Medical Assistance ("Medicaid"), and child care subsidies. Budget 2 represents the case of a one-child single-parent family that does not receive such assistance, which a significant percentage of poor families do not because of barriers to obtaining these benefits.¹³ These two examples bracket the range of

¹⁰ Guttmacher Institute, Induced Abortion in the United States, 2017 Fact Sheet, <https://www.guttmacher.org/fact-sheet/induced-abortion-united-states>.

¹¹ Ibid.

¹² A number of organizations have developed what are called "basic needs budgets," defined as the income a family needs in order to attain a secure yet modest living standard, by estimating community-specific costs of housing, food, child care, transportation, health care, other necessities, and taxes. The Economic Policy Institute estimates, for example, that a single parent with one child in the Des Moines/West Des Moines, Iowa metropolitan area needs \$3,854 a month, or \$46,246 a year, to live with dignity. E. Gould et al., "Family Budget Calculator," Economic Policy Institute, <http://www.epi.org/resources/budget/> (April 2017). While this is a useful exercise, it does not explain how a large percentage of the population actually lives on far less than this amount. The example provided here is based on budgets collected from poor families by the author for a research project on transitions from welfare (see Collins, J., and Mayer, V., *Both Hands Tied: Welfare Reform and the Race to the Bottom in the Low-Wage Labor Market*, Chicago: University of Chicago Press, 2010).

¹³ Since 1996, states have been allowed to make some benefits conditional on particular behaviors, such as working, seeking work, drug and alcohol testing, marrying, etc. These "conditionalities," as well as challenges documenting income for eligibility, difficulties traveling to program offices to make an application, not having access to a computer to apply online, and difficulty reading or understanding program eligibility requirements and rules can impede participation in benefit programs. The federal government estimates that 75% of eligible households receive the Earned Income Tax Credit. United States General Accounting Office,

budgetary possibilities for families at this income level. The income and expenditure categories included in this budget are consistent with the basic family budgets developed by the Iowa Policy Project, but the expenditure estimates provided here are significantly lower for most categories.¹⁴

15. Sample Monthly Budget 1 (1 parent and 1 child living on one minimum wage salary, receiving EITC, SNAP, Medicaid, and childcare subsidies)

- \$845 for rent¹⁵
- \$200 for car payment and related expenses, including insurance
- \$150 for utilities
- \$212 food [\$312 minus \$100 in SNAP benefits]¹⁶
- \$248 for childcare [after \$401 subsidy]¹⁷
- \$50 a month for telephone service
- \$30 medical [co-pays after Medical Assistance]

“Earned Income Tax Credit Participation.” GAO-02-290R. Washington, DC: U.S. General Accounting Office, 2001. Nationally, the Medicaid participation rate for eligible individuals has been estimated at about 90%. ¹⁵ Median fair market value for rent for a two-bedroom apartment in the Cedar Rapids Metropolitan Area, as calculated by the U.S. Department of Housing and Urban Development. . The median fair market rent in Cedar Rapids is midway between Des Moines IA (\$935) and Ames IA (\$785). Median rents in many rural counties are higher than these urban averages due to scarcity of units. Fair Market rent is the 40th percentile of gross rents for typical, non-subsidized rental units occupied by recent movers in a local housing market. U.S. Dept. of Housing & Urban Development, FY2017 Hypothetical Small Area FMRs for Cedar Rapids, IA MSA, *available at:*

https://www.huduser.gov/portal/datasets/fmr/fmrs/FY2017_code/select_Geography_sa.odn

¹⁶ Based on the cost of a “low-cost” food plan, as determined by the U.S. Department of Agriculture, “Official USDA Food Plan: Cost of Food at Home at Four Levels, U.S. Average,” May 2016 and the average food stamp amount per recipient in Iowa, according to the Henry J. Kaiser Family Foundation, “Average Monthly Food Stamp Benefit per Participant, 2015,”

<http://kff.org/other/state-indicator/avg-monthly-food-stamp-benefits/?currentTimeframe=0&sortModel=%7B%22collId%22:%22Location%22,%22sort%22:%22asc%22%7D>

¹⁷ The average cost of childcare in Iowa was \$649 a month for a toddler in 2014. Andrew Ba Tran, “The Average Cost of Child Care by State,” *Boston Globe*, July 2, 2014. The average monthly state subsidy per child in Iowa is \$401 per month. Iowa Department of Human Services, “Child Care Assistance,” 2017, http://dhs.iowa.gov/sites/default/files/18-DHS-6-3_CCA_Narrative.pdf

-\$50 personal care and household care items
+\$323 Federal and state EITC

Total Expenses: \$1,462 a month or \$17,544 annually; \$3,044 more than the annual net income from a full-time, year-round minimum wage job.

16. Sample Monthly Budget 2 (1 parent and 1 child living on one minimum wage salary, without state and federal assistance)

-\$845 for rent¹⁸
-\$200 for car payment and related expenses, including insurance
-\$150 for utilities
-\$312 for food
-\$649 for childcare
-\$50 for telephone service
-\$100 for medical services and prescriptions
-\$50 for personal care and household care items

Total Expenses: \$2,356 per month or \$28,272 per year; \$13,772 more than the income from a full-time, year-round minimum wage job.

17. As you can see, a family living with sample budget 1 brings in \$254 less per month than their expenses require and a family living with sample monthly budget 2 brings in \$1,148 less per month than their expenses require. Moreover, the examples presented above do not consider the cost of clothing, furniture, school fees, cable, or internet service. They leave out any recreation, vacations, gifts, computer equipment, books, and children's toys whatsoever, as well as repayment of existing debt or any provision for savings. And women with more than one child or another dependent family member will face additional expenses.¹⁹ Therefore, a family with only one member working full-time, year-round for minimum wage without federal and state assistance will have basic expenses that greatly exceed earnings from a minimum wage job. Clearly, a household in this situation does not bring in enough income to meet even the most

¹⁸ Same sources as previous example.

¹⁹ Jerman, J., Jones, R.K., Onda, T., "Characteristics of Abortion Patients in 2014 and Changes Since 2008" Guttmacher Institute, 2016, *available at* https://www.guttmacher.org/sites/default/files/report_pdf/characteristics-us-abortion-patients-2014.pdf. The Guttmacher study notes that one-third of patients had carried two or more pregnancies to term.

basic expenses for rent, food, transportation and utilities and will face dilemmas of debt, unpaid bills, eviction, and repossession of vehicles on a recurring basis. Experts have shown that families living at this level of income are especially vulnerable to “critical hardships,” such as homelessness, going without food, or going without necessary medical care.²⁰ A household that receives the full range of federal and state assistance (EITC, SNAP, Medicaid, and child care subsidies) will likely face fewer such crises. But such a household still will regularly go without basic necessities to make ends meet, because, as noted previously, the budgets outlined above do not provide sufficient income and do not account for emergencies, such as the breakdown of a car or lost wages due to illness.

18. Families at this level of income are living on the very edge of subsistence. Simply put, any additional expense, even those that involve what seem like relatively small dollar income amounts to middle-income people, can make an extraordinary difference in their lives. For these families, paying for such additional expenses can mean that there is not enough food to eat in the house, that the family cannot pay their utility bills (thus risking the shut off of essential services), or that the family falls behind on their rent payments (putting them at risk for eviction).

Burdens Associated with the Act

19. To comply with the Act, women who seek an abortion will need to make an additional trip to one of the eight cities where abortions are available. Up to the tenth week of pregnancy Imp, a woman can receive medication abortion services at clinics in Sioux City, Council Bluffs, Ames, Des Moines, Cedar Falls, Iowa City, Davenport, or Burlington. After the tenth week of pregnancy Imp, a woman can receive surgical abortion services in only two locations: Des Moines and Iowa City. In this affidavit, I use the example of a woman living in

²⁰ Boushey, H., Brocht, C., Gunderson, G., and Bernstein, J., “Hardships in America: The Real Story of Working Families,” Washington, D.C.: Economic Policy Institute, 2001.

Ottumwa, IA, a town of 25,000 people in Wapello County, and part of a reporting area that posts a rate of induced abortion near the median for the state. For this woman, the closest location to receive abortion services is Des Moines, a distance of 168 miles round trip. Under the Act, this woman must make two trips to the clinic, at least 72 hours apart. I calculate only the additional costs that would be imposed by the Act on a woman in this situation—that is, the costs of the second trip to the clinic.

20. In this affidavit, I also use the example of a woman from Sioux City, Iowa who is nearly 8 weeks pregnant and seeking a medication abortion and for whom the first available appointment is two weeks from the date of calling the clinic. The most recent available vital statistics report for the state of Iowa reports that 54% of abortions in the state in 2014–15 were medically induced.²¹ It is my understanding, based on information provided by Planned Parenthood of the Heartland, that 63% of abortions provided at their facilities from April 1, 2016 to March 31, 2017 were medically induced. According to PPH, more than 600 women received medically induced abortions in week 9 or 10 of their pregnancy. PPH also reports that clinics throughout Iowa are currently scheduling appointments one to three weeks from the time of the initial request for services. By doubling the number of appointments required to receive services, the Act will increase this waiting period and some women will not be able to see a clinician until they are past the tenth week of their pregnancy. In the example above, if the woman's appointment is delayed by even one week, she would need to travel to one of two cities where surgical abortion is available." For women in 70 of Iowa's 99 counties, this would involve traveling a greater, and in some cases much greater, distance to receive abortion services. In this example, if we assume that the woman from Sioux City is able to schedule the preliminary

²¹ Iowa Department of Public Health, Bureau of Health Statistics, 2015 Vital Statistics of Iowa, Table 50, p. 131.

ultrasound and other services at the Sioux City clinic, she would then need to travel, after at least 72 hours, to the Des Moines clinic for a surgical abortion. This would entail an additional 400 miles of travel (round trip) beyond what she would have traveled to receive a medication abortion closer to home. Exhibit B provides data on additional travel distances that would be required from the 70 Iowa counties where this situation pertains. Again, I calculate only the additional costs imposed by the Act, that is, the cost of this additional trip.

21. Traveling long distances presents particular burdens for low-income women that will make it difficult for all and impossible for many low-income women in Iowa to make the additional out-of-town trip needed to receive an abortion under the Act. These burdens include arranging and paying for additional transportation, the ability to arrange for time off from work, lost wages, and arranging and paying for child care. I discuss each of these below.

1. Transportation/Hotel

22. The Act will require substantial additional travel, creating logistical and financial difficulties for many poor and low-income Iowa women.

23. The scenarios outlined assume that a woman is able to drive to Des Moines or Iowa City to receive abortion services. However, for a number of reasons, many low-income women in Iowa will not be able to make this trip by car. A significant number of low-income women live in a household with no car at all or do not have access to a car, especially one suitable for a long trip. Researchers have found strong income disparities in car ownership. A 2006 study found that 4% of individuals in Des Moines and 6% of individuals in Sioux City lived in households that did not have access to a car,²² and these individuals are almost

²² Berube, A., E. Deakin, and S. Raphael, "Socio-economic Differences in Household Automobile Ownership Rates," University of California Transportation Center Working Papers, Table 1, June 2006, available at: www.socrates.berkeley.edu/~raphael/BerubeDeakinRaphael.pdf. It is important to remember that 4–6% is the percentage of the overall population. If we assume

exclusively poor and low-income. Even those low-income women who live in a household with a car may not have ready access to the car such that they can take two round trips out of town within a week. In poor and low-income families there are often competing demands for the car because other family members need it to get to work or to school and therefore the car is unavailable to the woman. Moreover, those low-income women who do have access to a car may not have one that is functioning or that is suitable for a several hour drive. They may be reluctant to borrow a car because they do not want to disclose to a partner or family members that they are seeking an abortion. This unwillingness to disclose the purpose of the trip may be motivated by a desire for privacy or a wish to avoid conflict or even violence. According to the non-profit “Working Cars for Working Families Project” run by the National Consumer Law Center, “Used cars marketed to working families are often in poor repair and have mechanical defects. Frequently these cars have suffered previous undisclosed damage from traffic collisions or floods. All too often used cars are not only unreliable, but unsafe.”²³ Reasonable fears of vehicle breakdown are a significant deterrent to long-distance travel, particularly during the winter months in Iowa. Thus, for many low-income women, travel by car to a distant clinic will not be a realistic option. However, the following scenarios outline the costs (in terms of transportation and time only) that trips to Des Moines from Ottumwa and from Sioux County would entail.

that poor individuals are disproportionately unable to access automobiles, then the percentage of lack of access among the poor would be significantly higher. Data broken down by poverty status is not available however.

²³ National Consumer Law Center, Working Cars for Working Families Project, “Dangerous and Unreliable Vehicles,” available at: <http://www.workingcarsforworkingfamilies.org/promoting-improved-public-policy/dangerous-and-unreliable-vehicles>.

24. Example 1. Scenario 1. Additional trip - Ottumwa to Des Moines by car

Assuming 84 miles each way or 168 additional miles
Assuming 20 miles per gallon²⁴ and gasoline costs of \$2.40²⁵
Additional cost of transportation: \$20.16
Additional travel time: 3 hours

25. Example 2. Scenario 1. Additional trip - Sioux City to Des Moines by car

Assuming 200 miles each way or 400 additional miles
Assuming 20 miles per gallon²⁶ and gasoline costs of \$2.40²⁷
Additional cost of transportation: \$48.00
Additional time: 7-8 hours

26. For the significant percentage of women who cannot make this trip by car, their only option is public transportation. For the woman in Example 1, traveling from Ottumwa to Des Moines, the only regular bus is a Burlington Trailways. The only scheduled trip leaves Ottumwa at 4:05 pm and arrives in Des Moines at 5:35 pm. The return trip leaves Des Moines for Ottumwa at 8:55 am the next morning, arriving at 10:25 am. Given clinic hours, this option would require spending two nights in Des Moines (a three-day trip). The woman traveling from Sioux City to Des Moines would need to take a Jefferson Lines Bus to Council Bluffs and transfer to a Burlington Trailways connecting to Des Moines. This bus leaves at 2:30 pm, arriving in Des Moines at 10:55 pm. The return bus leaves Des Moines at 11:15 pm arriving in

²⁴ The average mileage per gallon of U.S. cars in early 2013 was 24.6. This figure includes hybrid vehicles and is weighted toward a newer stock of cars. Those available to poor individuals are likely to get fewer miles per gallon because they are older and in poor repair. ("Average Fuel Economy of U.S. Cars Reaches an All-Time High," *Christian Science Monitor*, April 6, 2013, <http://www.csmonitor.com/Business/In-Gear/2013/0406/Average-fuel-economy-of-US-cars-reaches-an-all-time-high>); for a discussion of the lower mileage obtained by older cars in poor repair, see U.S. Dept. of Energy, "Keeping Your Vehicle In Shape," www.fueleconomy.gov/feg/maintain.jsp.

²⁵ American Automobile Association, "Gas Prices," April 29, 2017 *available at*: <http://gasprices.aaa.com>.

²⁶ See footnote 23.

²⁷ See footnote 24.

Sioux City at 7:50 am. This would also require a three-day trip. These are not realistic options for low-income women given the need to take time off work and find childcare. Paragraphs 29 and 30 present the scenarios for these two women.

27. While most sizeable towns in Iowa have some access to daily intercity bus service, the number of trips and options are often limited, as this example suggests. Also, as Exhibit C indicates, there are many counties that are not regularly served. In this case, a woman could only access public transportation to Des Moines or Iowa City by getting a ride to a major town.

28. An additional obstacle for a woman using public transportation who needs to stay overnight in the town where abortion services are provided is the fact that many poor and low-income individuals do not have credit cards and are thus unable to book a room.²⁸

29. Example 1. Scenario 2. Additional trip - Ottumwa to Des Moines by bus

Round-trip bus fare: \$60

Two night stay at budget motel in Des Moines: $\$74 \times 2 = 148$

Additional cost: \$208

Additional time: 3 days

30. Example 2. Scenario 2. Additional trip – Sioux City to Des Moines by bus

Round trip bus fare: $\$64 + \$61 = \$125$

Two night stay at budget motel in Des Moines: $\$74 \times 2 = \148

Additional cost: \$273

Additional time: 3 days

²⁸ Klawitter, M. and Morgan-Cross, C., “Assets, Credit Use and Debt of Low-Income Households,” unpublished paper, Evans School of Public Affairs, University of Washington, Table 4, May, 2012. Data derived from Financial Industry Regulatory Authority (FINRA), “National Financial Capability Survey,” 2009. http://depts.washington.edu/wcpc/sites/default/files/papers/Credit%20andDebt%205_23_12.pdf. This study finds that among families with less than \$25,000 in annual income, fewer than 40% have credit cards.

31. The costs listed in the scenarios above are just the additional dollar amounts associated with transportation and hotel. As detailed below, however, these dollar amounts are only the tip of the iceberg when considering the total burdens the Act imposes.

2. Time Away from Work

32. For many working poor women in Iowa, it will be extremely difficult, if not impossible, to take additional time away from work in order to make the additional trip required by the Act, particularly if an overnight stay is entailed. For those women who are able to take time off from work, the additional travel and time away will result in lost wages and increase the risk of employer sanctions and/or job loss.

33. Low-wage workers are the least likely to have access to paid sick days or personal days and are therefore more likely than other workers to lose pay when they are sick or require health care services. Only one-third of U.S. workers whose average wage is in the lowest 25% have paid sick leave. For those whose average wage is in the lowest 10%, the figure is 1 in 5. These are national averages; according to the U.S. Bureau of Labor Statistics, mid-western workers were slightly less likely than those in other regions to have paid sick days.²⁹

34. Even getting unpaid time off from work can be difficult for low-wage workers. More than a third of all individuals classified as working poor in the U.S. are employed in the service sector, and women are more heavily represented in this sector than men.³⁰ Their top occupations include: cashiers, cooks, cleaning staff, health and personal care aides, wait staff, drivers, retail workers, personal care aides, child care workers, and food preparation workers.³¹

²⁹ U.S. Department of Labor, Bureau of Labor Statistics, “Employee Benefits in the United States 2013,” Table 6, July 2013. <http://www.bls.gov/news.release/pdf/ebs.pdf>.

³⁰ U.S. Department of Labor, Bureau of Labor Statistics, “A Profile of the Working Poor, 2010,” Report released March 2012, p. 3. <http://www.bls.gov/cps/cpswp2010.pdf>.

³¹ Wicks-Lim, J., “The Working Poor: A Booming Demographic,” *New Labor Forum* 21(3): 17-25, 2012, p. 21.

These jobs are more likely than others to entail non-standard and irregular work hours, including non-fixed working schedules that require the worker to be on call.³² This makes it difficult for workers in these jobs to schedule appointments of any kind, particularly those requiring an extended absence or more than one absence in a week.

35. In addition, individuals employed in low-wage service sector jobs face severe consequences for taking time off work, as low-wage service sector jobs have some of the labor market's strictest work rules. Labor market analysts studying the service sector have reported that: "Parents were unable to miss a shift without losing pay or even their employment. Their jobs tended to have strict start times and even tardiness had serious consequences."³³ In addition, many employers require workers to explain why they need time off, or to bring a doctor's note, particularly when workers are taking multiple days off. The extra time off that travel requires can make it even more difficult for a low-income woman to keep her abortion confidential from her employer.

36. As demonstrated in the above scenarios, the Act will require women to miss more work than required previously. When considering missed time from work, we must consider how much work the woman must miss as a result of travel, including the complexities of bus schedules if she is using public transportation, as well as the appointment itself.

37. The 2016 minimum wage in Iowa is \$7.25 an hour.³⁴ In the first scenario of Example 1 above (Ottumwa to Des Moines by car), if we consider the travel time and the time required for the appointment, a woman is likely to lose 5 hours of work, or \$36.25. In the first scenario of Example 2 (Sioux City to Des Moines by car), she will need to forego at least 8 hours in wages or \$58. In both scenarios that entail taking a bus, the woman would lose three days of work and \$174 in income.

38. In addition, a woman seeking an additional, unscheduled day off from work, and perhaps two days off from work in a week, is at great risk of disciplinary action or job loss. If a woman were fired for missing a shift or for requesting additional time off, this would result in major economic disruption for her and her family. Losing a job can lead to missed utility bill payments and service cut-offs; it can lead to families going without enough food or necessary medical care; and it can lead to missed rent payments, hunger, and ultimately to homelessness. Once a person enters homelessness, it can become significantly harder for him or her to obtain new employment, further entrenching the cycle of poverty.

3. *Child Care*

39. The additional travel time or overnight stay required by the Act will also create childcare dilemmas for some women seeking abortion services, will increase the cost of child

³⁴ U.S. Dept. of Labor, Iowa Minimum Wage Rates, <http://www.dol.gov/whd/minwage/america.htm#Iowa>.

care for women who use paid childcare, and will prevent some women from obtaining an abortion at all.

40. Given the significant travel times associated with using public transportation to travel out of town, it may be difficult for a low-income woman to find a friend or family member who can care for her child for the entire time she will be away, because, as I explain further below, low-income women have friends and family members who are also resource poor and working in low-waged jobs and thus may not be able to care for a child for several hours, or even days. Thus it is very likely that low-income women who will be away for an extended period of time will need to resort to childcare on the marketplace.

41. Indeed, researchers report that women who must pay for childcare during the time that they are receiving abortion services pay an average of \$57.³⁵ The woman in Example 1 who has access to a car and makes an extra trip from Ottumwa to Des Moines will require at least 5 additional hours of childcare (3 hours of driving without traffic and 2 hours for her clinic visit). The woman in Example 2 who has access to a car and travels from Sioux City to Des Moines and back will require at least 10 additional hours of child care. The cost of childcare is approximately \$5.00 per hour.³⁶ The additional childcare costs for these women will therefore be, at minimum, \$25.00 and \$50.

42. In the event that a low-income woman does not have access to a car that can be used for an additional long-distance trip, and needs to use public transportation, the trip will require at least 3 days' absence. If a woman must stay overnight for one or more nights in order to obtain an abortion and does not have friends or family who are able to care for her children in

³⁵ Jones, R. K., Upadhyay, U. D., and Weitz, T., "At What Cost? Payment for Abortion Care by U.S. Women," *Women's Health Issues* 23(3): 3173-3178, May 2013, p. 10.

³⁶ IowaChildCare.net, "Iowa Child Care Rates," <http://www.iowachildcare.net/childcare-rates.php>

her absence, she will likely be unable to obtain her abortion. There are simply no market solutions for a woman in this situation. Although there are overnight daycares in some cities, they are time limited—usually to 11 PM and 7 AM—and a child cannot stay there for extended periods of time. Indeed, a daycare center is likely unwilling to (or even prohibited from) care for a child for more than eight hours.

4. Summary of Additional Costs for Women Affected by the New Law

43. Individual cases will vary, but the numbers and discussion presented above show the following additional costs:

Example 1, Scenario 1 (Ottumwa-Des Moines by car): \$20.16 (transportation) + \$36.25 (lost wages) + \$25.00 (child care) = \$81.41

Example 1, Scenario 2: (Ottumwa-Des Moines by bus): \$208 (transportation and hotel) + \$174 (lost wages) = \$382.00³⁷

Example 2, Scenario 1: (Sioux City-Des Moines by car): \$48 (transportation) + \$58 (lost wages) + \$50.00 (child care) = \$156.00

Example 2, Scenario 2: (Sioux City-Des Moines by bus): \$273 (transportation and hotel) + \$174 (lost wages) = \$447.00³⁸

This is not the full cost of obtaining an abortion, but the *additional* financial cost (for the additional mileage, additional lost work time, additional child care, etc.) beyond what a woman would have incurred prior to the Act. And it does not consider the cost of the abortion itself.

44. The total additional cost required for a woman to travel outside her hometown for her pre-abortion visit may not seem great to someone with a middle class income, but it is an extremely significant expense for those living in poverty. In light of the sample budgets

³⁷ Does not include cost of paid childcare, since it is not likely to be available.

³⁸ See footnote 35.

presented in paragraphs 15 and 16, adding even \$100 to the already significant cost of an abortion represents a substantial burden. As the budgets outlined above demonstrate, a family that receives all available benefits still does not have enough to meet all of its expenses. At the higher end of the range of possible costs, the added expense would represent almost an entire month of income, a sum that could not simply be absorbed, but would represent a major financial shock and setback.

45. Importantly, these additional costs apply only to those women who are even able to access abortion after the Act goes into effect. First, as explained above, a woman with children and no car, unless she has friends or family who are able to care for her children, is very unlikely to be able to make the additional trip and will therefore be prevented from obtaining an abortion. These low-income women—those with children and without family or friends with resources to support them—and their families are perhaps those who will be most adversely affected by lack of access to abortion. In addition, it may take women some time to pull together the resources they need. This delay, combined with the delays created by the Act as clinics seek to schedule additional visits per procedure for every abortion patient, may make it impossible for some poor women to arrange services before the gestational age limit imposed by the Act.

46. The financial burdens presented by the Act are not just an issue of how a low-income woman must spend her cash for a given month. Many low-income women simply do not have money on hand, such that even if they were willing to forego other necessities, they simply may not be able to pay for a bus ticket, extra gas, a hotel, or childcare. This is due to the fact that low-income women have few good options for obtaining the extra cash that they need through the mainstream banking system. According to the Federal Deposit Insurance Corporation (FDIC), 22% of low-income households (which they defined as making under

\$15,000 a year) are “unbanked” and half are “under-banked.” This means that members of these households conduct some or all of their financial transactions outside the mainstream banking system. All under-banked and 65% of unbanked families rely on what are called “alternative financial services” (non-bank money orders, non-bank check cashing services, pay-day loans, prepaid non-bank debit cards, etc.).³⁹ Few of these families have savings accounts of any kind. Among families with less than \$25,000 in annual income, fewer than 40% have credit cards.⁴⁰ What this means is that most low-income individuals do not have access to short-term loans through mainstream banking channels and do not have the option of charging expenses to a credit card.

47. Should these individuals turn to alternative financial services for short-term loans, they face extraordinary fees. A 2012 report authored by two members of the Federal Reserve Board presented the following common practice among so-called “pay day lenders”: a short-term loan service charges a fee of \$17.50 for every \$100 loaned. Because the term is so short, a \$400 loan, for example, over a four-week period with a \$70 fee generates an implicit annual interest rate of 450%. If an individual cannot pay at the end of four weeks and rolls the loan over, they can become trapped in a debt spiral from which it is difficult to extricate themselves.⁴¹

48. Another option available to low-income women seeking resources to meet these expenses is to borrow from family and friends. One study reported that 50% of all women seeking abortion services relied on someone else to help them cover costs, most commonly the man involved in the pregnancy (nearly two-thirds of instances), but also friends and family.⁴² However, as one social services case worker pointed out in a recent study of women living in poverty:

These are resource-poor people . . . You know, if I have a problem, I get on the phone, I call my relatives, I call a friend, I borrow a car—whatever it is. I’ve got backup all over. Poor people have other poor people for friends, so their systems are resource-poor.⁴³

Partners and family networks may not always have the resources to assist with the costs involved and tapping those networks results in a loss of privacy. An additional difficulty may result when women need to request aid from sexual partners who are not supportive of their decision to obtain an abortion or who have a history of abusive or violent behavior. This strategy can be extremely dangerous, in light of the high rate of domestic violence among low-income women, and may result in the partner attempting to prevent her from obtaining the procedure and/or in episodes of violence.

49. A third strategy that low-income women may use to cover abortion-related costs is to not pay other bills. Results from a survey of women seeking abortion found that many women—one-third of the study sample—delayed paying or did not pay bills in order to have money to pay for their abortion. One third of women in this study said that they delayed paying electricity bills, insurance bills, or car payments, while close to one-sixth said that they did not

⁴² Jones, et al., “At What Cost?” op. cit., p. 9-10, 21.

⁴³ Collins and Mayer, op. cit., p. 84.

buy food or pay rent.⁴⁴ The consequence of not paying a utility bill is having that service disconnected. The consequence of not paying rent may be eviction.

5. Intangible Costs

50. Monetary costs do not fully reflect the burdens of travelling farther and being away from home longer for low-income women. Intangible costs and burdens—the stress of travel to unfamiliar parts of the state, the difficulties encountered in trying to keep the reason for the travel confidential from one’s employer or an abusive partner—can just as effectively prevent low income women from exercising their right to obtain an abortion. I am familiar with these difficulties through my independent research and my review of the relevant literature.

51. Additional trips (or overnight stays) can also magnify stress and worry for women attempting to obtain an abortion. When women must organize more complex and lengthy trips, and when they need to rely on parents, spouses, or friends for assistance under those circumstances, it become more difficult to obtain an abortion without a parent, spouse, or friend finding out about the procedure. The more complex and costly the arrangements required, and the more time that a person must spend traveling to the clinic, the greater the chances that confidentiality surrounding the procedure will be sacrificed.

52. The fact that financial, logistical, and psychological burdens can delay or prevent low-income women from obtaining an abortion has been well documented by women’s health researchers. One study reported:

For women pulling together money to pay for the procedure as well as transportation and missed work, these relatively small amounts can prove impossible to procure and could prevent women from obtaining a wanted abortion.⁴⁵

⁴⁴ Jones et al., “At What Cost?” op. cit., p. 10.

⁴⁵ Jones et al., “At What Cost?” op cit., p. 12–13.

A second study noted that difficulty financing an abortion was a significant factor leading women to delay seeking abortion services, resulting in more dangerous and costly second trimester abortions.⁴⁶

Conclusion

53. Poor and low-income women living in Iowa will face extraordinary challenges meeting the additional financial, logistical, and psychological costs as a result of having to make an additional trip to a clinic; where the logistics of this trip delay an abortion past the tenth week, they will not only lose the option of a medically induced abortion but will need to travel what are often much longer distances to reach a clinic that performs surgical abortions. This not only entails having to travel longer distances, but will also require them to be away from home (and jobs and children) for longer periods of time. For the many low-income women who need child care or who will lose income because they do not have paid sick days (or will even lose their job because they cannot take unpaid leave), as well as for those who do not have access to a car and will have to rely on public transportation, the additional cost and time required for this travel may pose an insurmountable challenge. Some will not be able to obtain an abortion. Other women may be delayed in trying to gather the resources to do so. In sum, as a result of the Act, a significant number of poor and low-income women will no longer be able to obtain the abortions they seek or will be delayed in doing so.

I declare under penalty of perjury that the foregoing is true.

The Environmental Effects of Social Differentiation. Center for Human Ecology, Rutgers.

1984 The Impact of Wage Labor and Cash Cropping on Aymara Communities. Department of Anthropology/Latin American Studies Program, Cornell Univ.

Land Tenure, Institutional Factors and Producer Decisions on Fragile Lands. Land

Tenure Common Theme Workshop, USAID/University of Wisconsin Land Tenure Center, Annapolis.

Colonization and Smallholder Coffee Production on the Steep Slopes of the Eastern Andes. Colloquium, Center for Latin American Studies, Univ. of Florida.

PROFESSIONAL ACTIVITIES

Offices Held in Professional Associations:

2009-2011	President, American Ethnological Society
2007-2009	President Elect, American Ethnological Society
1989-91	President, Association for Feminist Anthropology
1986-89	Councilor, Society for Latin American Anthropology

Member: American Sociological Assoc., American Anthropological Assoc., American Ethnological Soc., Rural Sociological Soc., Sociologists for Women in Soc., Labor and Labor Movements section of ASA, Soc. for Latin American Anthropology, Assoc. for Feminist Anthropology, National Women's Studies Assoc., Soc. for Economic Anthropology

Editorial Work: Editorial Board, *American Ethnologist*, 2011-present; *North American Dialogue*, 2008-present; *Luso-Brazilian Review*, 1995-2000; *Journal of Latin American Anthropology* 1999-01; editorial advisory board for series on "Economic Transformations," Agenda Publishing, UK. 2016-

Book Prize Committees: Labor and Labor Movements Section Prize (ASA); Senior Book Prize Committee (AES); Sarah Whaley Prize (NWSA).

Review committees for: Center for Engaged Scholarship, National Science Foundation, Wenner Gren Foundation, National Geographic Soc., Howard Heinz Endowment, Inter-American Foundation.

Sessions, panels and conferences organized:

2016	Anthropology and the Politics of the Public Sphere, American Anthropological Association, Minneapolis
2011	Perspectives on the Budget Crisis in Wisconsin and Puerto Rico. American Ethnological Soc., San Juan, PR
2009	Labor Studies for the Twenty-first Century. Speakers Series, UW Havens Center, (w/ Will Jones).
2008	New Landscapes of Inequality. Amer. Anthropological Assoc., San Francisco. The Prospects for Global Citizenship, Amer. Ethnological Soc., Wrightsville Beach, North Carolina.
2006	New Landscapes of Inequality. School of Advanced Research, Santa Fe, New Mexico. (w/ Micaela di Leonardo and Brett Williams)
2005	Qualitative Approaches to the Study of Poverty and Welfare Reform, Inst. for Research

on Poverty, UW March 4-5.

- 2004 Trademark Licensing and Code of Conduct Compliance, co-organized for UW Labor Licensing Policy Committee, March 24-25.
- 2002 Labor in the Global Economy. Speaker Series. UW Havens Center (w/ Gay Seidman).
- 1998 Work & the Life Cycle. Invited session, 14th World Congress of Sociology, Montreal.
- Work time Flexibility in International Perspective, conference sponsored by Global Studies Program/MacArthur Foundation, UW.
- 1992 Local Impacts of Agricultural Restructuring, Invited session, Amer. Anthropological Assoc., San Francisco (w/ Lois Stanford).
- 1990 Social Science Perspectives on Environmental Management, for the Amer. Assoc. for the Advancement of Science, New Orleans.
- 1988 Invited session: "Conceptualizing Inequality: Class, Gender and Ethnicity in the Andes" for the Amer. Anthropological Assoc., Phoenix.
- Soc. for Latin Amer. Anthropology Roundtable Luncheons, Annual Meeting, Amer. Anthropological Assoc., Phoenix.
- 1985-88 Co-organizer, Human Rights Panel, Soc. for Latin Amer. Anthropology, 84th-87th Annual Meetings of the Amer. Anthropological Assoc..
- 1985 Soc. for Latin Amer. Anthropology session: "Labor Processes and Domestic Production in Latin America," Annual Meeting of the Amer. Anthropological Assoc., Washington. D.C.

Courses Taught (University of Wisconsin)

CESoc 955: Seminar in Qualitative Methodology: Case Study Research
CESoc 940: Seminar in Social Change: Commodities in the Global Economy
CESoc 925: Labor in the Global Economy
CESoc 754: Qualitative Methods in Sociology
CE Soc 540: International Development, Environment and Sustainability
CE Soc 341: Labor and Food Systems in the Global Economy
CE Soc 340: Critical Approaches to Food Systems
CE Soc 140: Introduction to Community & Environmental Sociology
GWS 320: Feminism and Consumer Culture.
GWS 441: Contemporary Feminist Theory
GWS 640, Advanced Seminar in Women's Studies
GWS 880, Introduction to Graduate Women's Studies
GWS 900, Research in Women's Studies.

Currently chairing 11 Ph.D. committees and 1 Master's committee. In 2016, I served as a member of 33 additional Ph.D. and Master's committees. I have served on the committees of students from 20 departments and programs across the university.

Selected University of Wisconsin Service

Social Studies Divisional Committee, 1995-97 (Chair, 1997)
L&S Financial Emergency Planning Committee, 1995-97
Graduate School Research Committee (Social Studies), 1997-99
Labor Licensing Policies Committee, 1999-2013
University Academic Planning Council, 2000-04
Chair, Land Resources Program Review Committee, 2002
Selection Committee, Associate Dean of Graduate School, 2002
Advisory Committee for Evaluating the Cluster Hiring Initiative, 2002-03
Human Subjects Institutional Review Board, Social Sciences, 2002-05
Inst. for Research on Poverty Executive Committee, 2006-present
Development Studies Program Executive Committee 2006-2011
Provost's Committee to Evaluate the Tenure Process, 2008-10
Latin American Caribbean and Iberian Studies Nave Lectureship Committee 2010-12
World Affairs and the Global Economy (WAGE) Steering Committee, 2009-2010
Chair, Land Tenure Center Review Committee, 2010
Gaylord Nelson Professorship Selection Committee, 2013
Graduate School Research Committee (Interdisciplinary), 2013
Selection Committee for Named Professorships, 2015-
Human Subjects Institutional Review Board, Social Sciences, 2016-

EXHIBIT B

Exhibit B: Round-Trip Distance (in miles) to Nearest Clinic Providing Medication Abortion and Nearest Clinic Providing Surgical Abortion for Iowa Counties (only those 70 counties here the distance is greater are listed)

	County	Closest Clinic for MAB	Closest Clinic for SAB	Additional Miles
1.	Adams	164 CB	178 DM	14
2.	Allamakee	196 CF	262 IC	66
